

Email Protection Service

Email Security

Email security is one of the fastest growing and business critical IT service requirements. In Q1 2009, spam levels averaged 72% of all email traffic and peaked at 96%. Cyber email threats are becoming more sophisticated and malicious with the rapid propagation of phishing, botnet and malware attacks. Email servers and on-premise solutions can't cope with increased email volumes and threats. MXSweep's email security-as-a-service platform, including email protection, provides businesses with a highly efficient, cost effective and reputable outsourced solution that addresses this critical IT requirement.

Protection against the inevitable

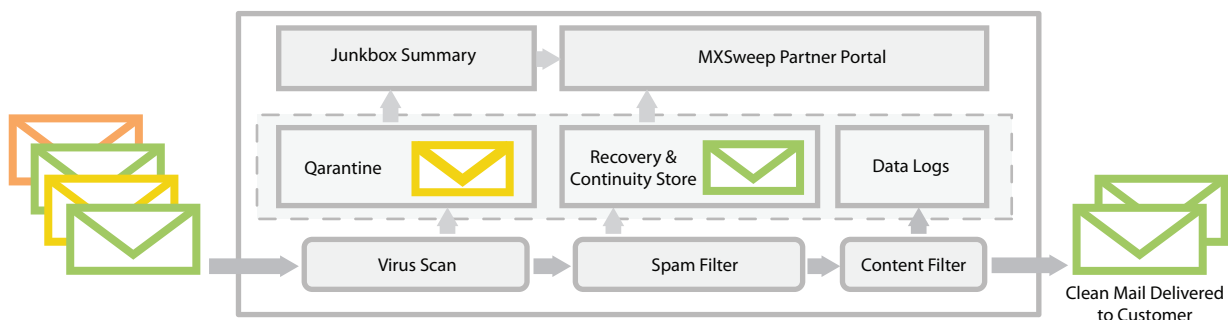

It's inevitable that from time to time every business will suffer disruption to its email service – inevitable, that is, if it's not adequately protected from threats like viruses, spam, phishing, denial-of-service attacks and more. That's where email protection from MXSweep comes in, available to our Managed Service Provider (MSP) partners as a valuable new service that you can provide to your customers. It's a hosted solution based on our email security-as-a-service model that gives our partners end users the benefits of 99.92% spam and 100% virus protection.

Our approach is straightforward – to prevent any threat from getting close to a user's network, while ensuring the 'good' stuff gets through. The approach might be straightforward, but the means of making it work is far from simple.

Market Leading Spam Filtering

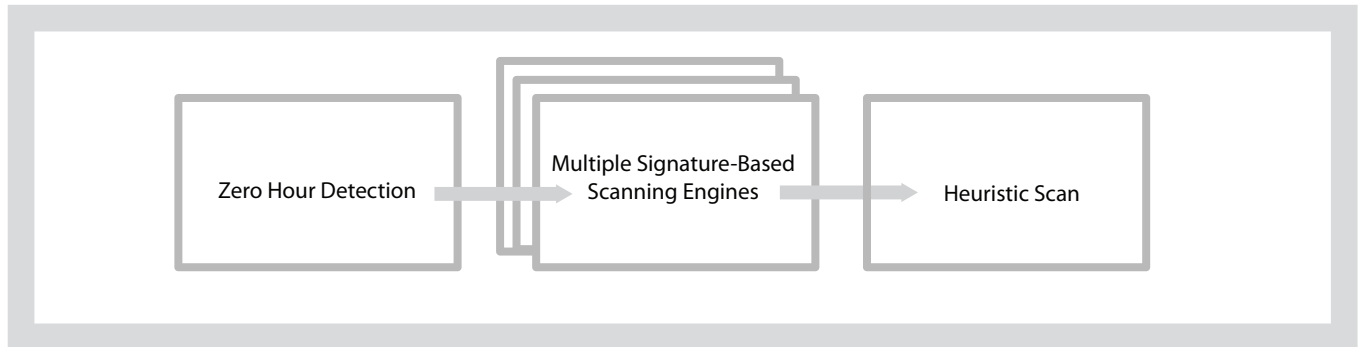

In fact, we recognise that to keep one step ahead in the constant development battle, we must be at least as sophisticated in our approach as the spammers, virus-writers and other internet bandits. This is why simply combining all the world's leading detection engines is not enough for us. We also deploy and constantly refine our own filtering technology in a unique, multi-layered approach to the protection challenge.

What's more, in our view it's a fundamental strength that our email protection is a true 'set and forget' solution – both for the end user and our MSP partners. All email is filtered offsite, threats are quarantined and only clean email is relayed to the end user's email server

100% Virus detection with Zero Hour Protection

With Industry-leading detection rates and all-the-time virus and spam outbreak protection users can rest assured that the quality of their email is guaranteed.

Features and benefits

- Industry-leading detection rates, enabled by the unique multi-layered combination of our filtering technology with the world's leading detection engines
- Real-time, all-the-time virus and spam outbreak protection
- Minimal customer intervention – all email is filtered offsite, threats are quarantined and only clean email is relayed to the server
- Inbound/outbound spam and virus protection. MXSweep also scans all outbound emails so that in the event of a virus outbreak on the customer network the threat will be contained and the customer's mail server will avoid being blacklisted.
- Close to zero false positive identification based on our 'circles of trust' technology meaning users receive every email they really need
- Painless contacts management due to intuitive, self-learning system
- User control – 'unjunk' links on the system's regular quarantine reports enable individual to retrieve disputed mails
- Easy, integrated management of every email account, including individual users, their aliases and the groups they're part of
- Straightforward setting of access and responsibility levels for every user
- Full management reporting to measure protection effectiveness
- Continuous reputation management through outbound zombie protection.
